

C30

The new C30 is a hardware base station that receives alarm signals from RDC's various cellular radios. Specifically designed to meet the demanding requirements of alarm response monitoring centres, it offers the highest level of intelligent signal processing. Comprehensive on-board technical support features mean that you get instant assistance and remote firmware upgrades happen with minimal disruption. The base has many advanced redundancy features including multiple means of communication and multiple battery backup features.

- Dual GSM networks (as primary) and Ethernet (as secondary), each serving as a fail-over for the other.
- Advanced technology at your fingertips on a touch screen display with scrolling status and instruction messages.
- Stress-free plug and play installation with multiple connection options including RS232, Ethernet, USB and WiFi connections.
- Internal lithium-ion batteries means the unit can be unplugged for support in the control room without interrupting the service.
- Compatible with current and future RDC GSM transceivers giving you the freedom to expand.
- Full event and error logging for up to 1 year for hindsight troubleshooting.
